(a) CSR mascons: the 234-basin sample and the fully covered comparison set

fully covered (n = 209) ● partially covered, excluded (n = 18) ▲ no usable GRACE-FCast cell (n = 7)

the last two categories are small coastal and island basins; each also carries a marker at its centroid

(b) JPL mascons: the fully covered comparison set

fully covered on JPL (n = 67) in the CSR sample, not fully covered on JPL (n = 167) land outside the basin sample

neutral shading marks the rest of the CSR sample
